

it all began with fire

CAMPFIRE TALES

For hundreds of thousands of years, human beings have used fire to obtain warmth, cook food and relax around.

Perhaps it was around the camp fire that we developed language and shared our experiences. It is therefore not particularly strange that fire still fascinates us and gives us an inner calm.

Today you can enjoy a beautiful fireplace and spread that superb warmth indoors.

And best of all – there doesn't need to be any smoke, soot and ashes.

Vauni gives you a designer fireplace which can be positioned wherever you want, and which burns environmentally friendly fuel. Furthermore, it is Swedish-designed, safe and simple to use. In other words, a completely new way to use fire indoors.

DESIGN WITH FIRE

A major benefit of Vauni's fireplaces is that they can be positioned precisely where you want. Furthermore, the design and size fits in most rooms – and for every conceivable style of interior decor.

Naturally, the fireplace is excellent in the living room when you want to bring family and friends together around the warming glow of the flames. Or in a

spacious hall when you want to give your guests a warm welcome.

Not to mention how cosy it can be in the bedroom on a raw autumn evening, when what you most want to do is withdraw with a good book.

And why not create something completely extra in the kitchen or bathroom with a built-in ethanol burner?

Designing a fireplace which paraphrases traditional wood heating entails a major challenge. For in the process, the authenticity that fire conveys – warmth, harmony, fellowship – must never be lost.

Vauni's design philosophy is based on the user's emotional need of fire. A lot of care is put into making the products flexible and attractive for people with varied requirements, tastes and circumstances.

We design unique products which communicate with the user. All materials are selected in order to harmonise with the fire's values and express aesthetics, quality and warmth. As a result, the fireplaces are beautiful, both with and without a fire burning in them.

LIMITED EDITION

The great thing about an open flame is that it goes well with most colours. Our globular fireplaces, Vauni Globe and Vauni Cupola (wall-mounted), are therefore available in lots of different colours. Besides classic white and black, we have selected a few favourites from among this year's design colours, which are sold under the name Vauni Limited Edition. The OF Wide fireplace, which can be placed in an open fireplace, is also included in the exclusive range.

The limited edition range has classic earthy colours which blend into most

homes. You can choose from: black, grey, wine red, sand white and the exciting colour, Nordic Rust. All the colours offer an exclusive, luxurious finish which produces a glittering lustre.

Vauni limited edition also includes three trendy colours and durable materials for the stone insert around the burner. The colours here are Black Granite (black), Ice Mineral (light grey) and Trilium Tech (rusty metal look). Vauni limited edition represents deluxe luxury.

VAUNI GLOBE

The globular fireplace, Globe, is Vauni's best seller and most popular product. Both the design and the size mean that it fits in every conceivable interior design style and room. It provides agreeable warmth and the size of the flame is infinitely adjustable. Globe is, as are all of Vauni's fireplaces, chimney-free and equipped with the market's most advanced ethanol burner. You avoid smoke,

soot and ashes. Vauni Globe is available in the standard colours of white and black, as well as five exclusive colours with extra lustre in the limited edition range. The inserts around the burner are available in the standard Cast Iron design, as well as in three exclusive stone versions. Choose whether you want to have Globe on a low or high base.

VAUNI CUPOLA

Vauni Cupola has the same superior and pure form as the Globe fireplace. The difference is that you mount it on the wall. The design fits in most homes and is a decorative element. As are the other fireplaces, Cupola is equipped with an advanced, adjustable ethanol burner. It is simple to install and can be mounted on all type of walls.

Cupola is available in the standard colours of white and black, as well as five exclusive colours with extra lustre in the limited edition range. Cupola provides you with completely new opportunities to use fire as a design feature inside your home.

made for dividing

VAUNI DIVIDER

An open fireplace made of glass. This is a good summary of Vauni Divider. The fireplace's clean lines and glazed sides give the fire a particularly striking impression and you can view it from all angles. Divider is an excellent means of providing atmosphere both on festive occasions and on an everyday basis.

Divider is equipped with a modern bioethanol burner with an extra wide flame profile, which provides an impressive play of light from the flames. It is simple to regulate the heat and the size of the flame with the control element supplied.

VAUNI **EDGE**

Vauni Edge is a wall-mounted, chimney-free fireplace with the timeless and simple form that is typical of Scandinavian design. The fireplace's simple and pure lines fit in most interiors. Edge is decorative and contributes to providing a comfortable heat.

The fireplace is simple to install and the low temperature at the rear means that you can mount it on all types of walls. Moreover, the thin design means that the fireplace appears to be built-in to the wall. Vauni Edge is available in three elegant versions: with front in black, white finish and stainless steel.

VAUNI SHADOW

Vauni shadow is a chimney-free fireplace with a glass front that is mounted on the wall. It is elegant, practical and looks good both lit and unlit. Shadow is simple to install and it can be mounted on all types

of walls thanks to the low temperature behind the heat source. The thin design also means that the fireplace appears to be built-in to the wall. Shadow is available with black and white front.

VAUNI OF WIDE

Vauni OF Wide is the ethanol burner if you are tired of smoke, soot and ashes from your wood-burning open fire. You can convert your open fireplace to ethanol whenever you want – without needing any installation. And when you want to use

wood all you have to do is lift the burner out. A convenient way of enjoying the new, environmentally-friendly technology. The fireplace also fits equally well on the coffee table or out on the terrace. OF Wide is the ethanol burner full of possibilities.

made for installing

VAUNI CI/CI WIDE

Vauni CI/CI Wide is the ethanol burner with maximum design freedom. It is intended to be built into fireproof material and does not require a chimney. A perfect

solution if you want to design your own built-in fireplace. There are no limits with Vauni CI/CI Wide and it fits in most homes and interior design styles.

MADE IN SWEDEN

IN SWEDEN, DARK WINTER EVENINGS AND CHILLY NIGHTS HAVE GIVEN US A VERY SPECIAL RELATIONSHIP WITH THE FIREPLACE.

We also have a special relationship to design and high quality products.

Vauni's fireplaces are the result of a close collaboration between Swedish designers and innovators from Chalmers University of Technology in Göteborg. It is therefore not particularly strange that the spherical Globe is manufactured using pressure turning and advanced laser cutting. And our ethanol burner has unique properties in terms of function and safety. Aesthetics and technology in a beneficial union, in other words.

HEAT

VAUNI'S FIREPLACES ARE CHIMNEY-FREE AND USE PURE BIOETHANOL.

This means that the energy supplied goes straight into the room in the form of pleasant heat – instead of disappearing out through the chimney as is the case with conventional wood stoves. The heat output is 2-3 kW depending on model, which is about half of a wood-fuelled heating stove.

It delivers a pleasant heat, without the room getting too hot. Quite simply, a fireplace adapted to modern houses.

SIMPLE

THE SIMPLEST WAY TO LIGHT A

FIRE. Never before has it been simpler to have a fireplace in your home. It is precisely that user-friendliness that is one of the greatest benefits of the chimney-free technology. All you need to do is fill with ethanol, light, and regulate the flame. Extinguish! Forget ashes, soot, smoke and wood that has to be brought in. No fuss, just lovely heat.

SAFE

WHEN WE DESIGN A FIREPLACE, WE BASE IT ON THE OPTIMUM SOLUTIONS. And its construction is based on the safest solutions in the market. We therefore only use non-combustible materials around our ethanol burner. Our aim is for you to have a safe fireplace with optimum functionality.

You can fill the burner with fuel and tip it upside down – and nothing will run out. In addition, you will appreciate the flame's soft start/stop, its effectiveness and its light intensity. Naturally, all our products are certified and type approved by KIWA.

ECONOMY

A FIREPLACE TO COUNT ON. If you are considering a fireplace at home, Vauni is among the most cost-effective solutions on the market. The biggest saving is that you don't need a costly chimney installation. Thanks to the energy-efficient technology, the running costs are also beneficial compared with using gas or purchased wood.

- The total cost (purchase + installation) is lowest for ethanol, followed by wood and gas.
- The running costs for wood and ethanol are equivalent, gas is most expensive.
- Maintenance costs (chimney-sweeping etc.) are additional for wood and gas.

ENVIRONMENT

OUR FIREPLACES FOR BIOETHANOL GIVE OFF HEAT IN A MODERN AND ENVIRONMENTALLY FRIENDLY WAY. This means that the combustion is completely clean and only small amounts of carbon dioxide and steam are produced – the same as in the air that you exhale. That's why Vauni does not need a chimney and you can place the fireplace in whichever room you like. Our own fuel, Vauni Eco Flame, is optimised for ethanol burners. Moreover, it doesn't smell, is biodegradable and is 100% renewable.
